Loading a file

- Load KKGK: Load a .kkgk file in the application's original format.

Audio playback

- Use the Play/Pause buttons (Space key) to play or pause the audio and MIDI
- Click the Stop button to return the playback cursor to the beginning
- Select the playback channels for the original audio, vocal audio, and MIDI using the L/R controls
- Adjust the volume using the slider that appears when hovering over the Volume button
- By default, MIDI playback uses Physical Time (lower panel). Use the "Metrical-Time MIDI Playback" checkbox to switch the MIDI playback mode
- Set the playback speed using the Speed control

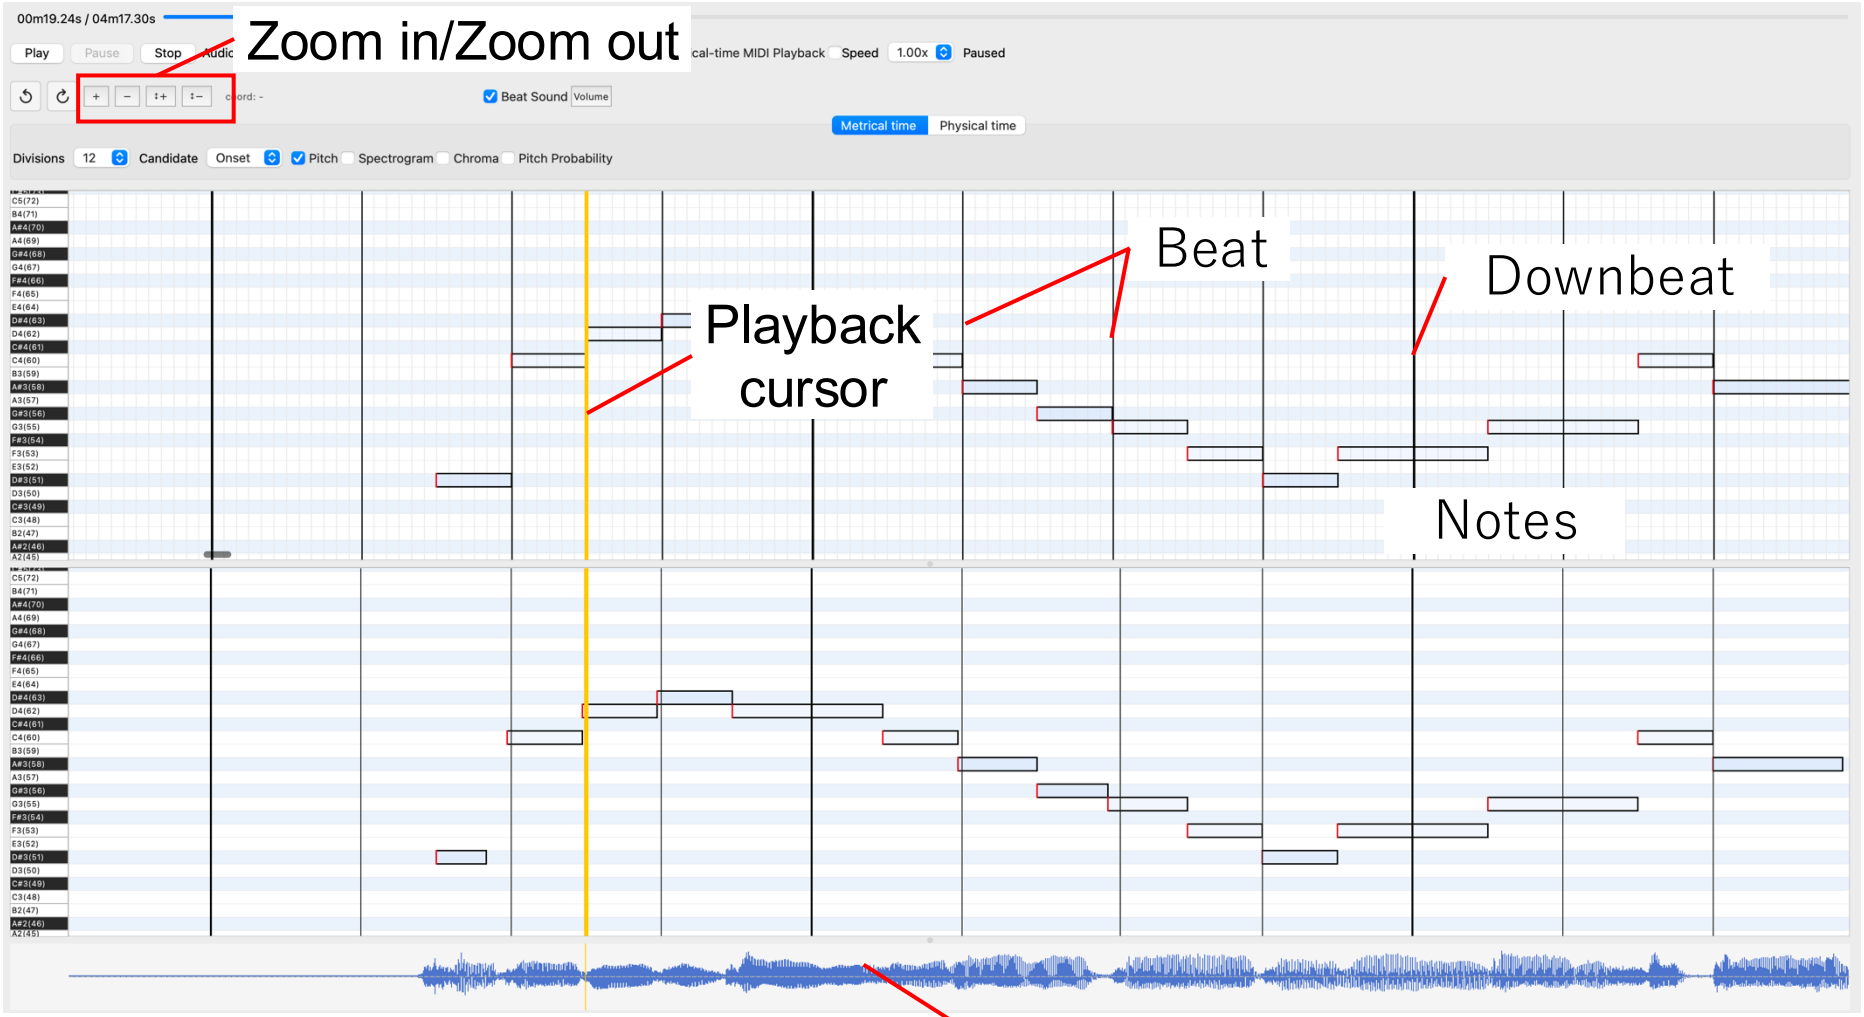

Editor interface

Metrical time

Physical Time

Vocal Audio Waveform

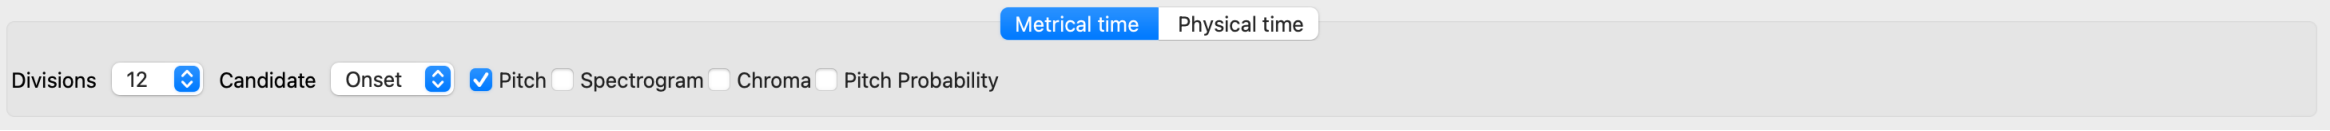

Note editing operations

- Select: Left-click a note, or drag to select multiple notes within an area
- Move: Drag and drop a note. Hold Shift to lock the time axis
- Adjust onset/offset: Drag the edges of a note
- Delete: Press Backspace while a note is selected
- Insert: Double-click to insert a note
- Split: Position the cursor at the desired split point and Alt (Option) + left-click
- Merge: Select multiple notes and press M to merge them
- Undo: Click the "↺" button in the upper-left corner or press Ctrl (Command) + Z
- Redo: Click the "↻" button in the upper-left corner

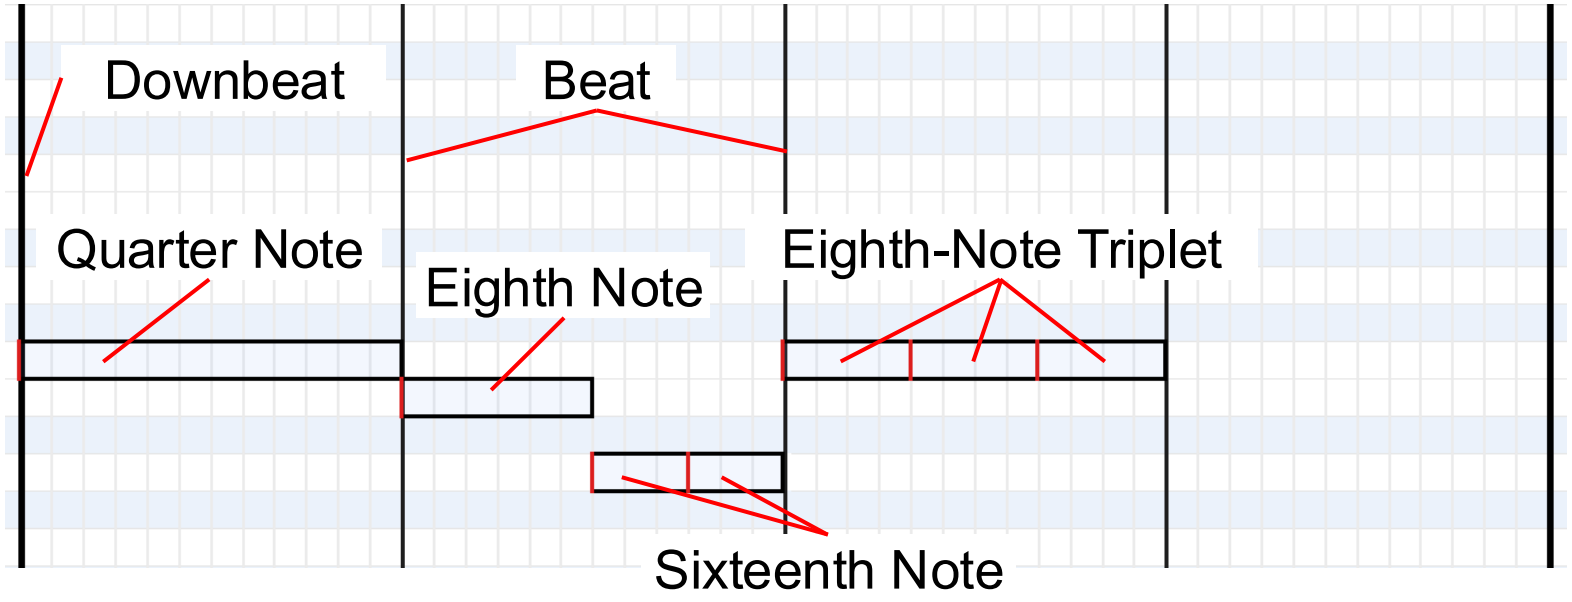

Metrical-time controls

- Subdivisions: Adjust the grid resolution
- Candidates: Select which correction candidates to display. Press C to switch between options
- Spectrogram: Display the spectrogram
- Chroma: Display chroma features
- Pitch Probabilities: Display the pitch probabilities predicted by the transcription model

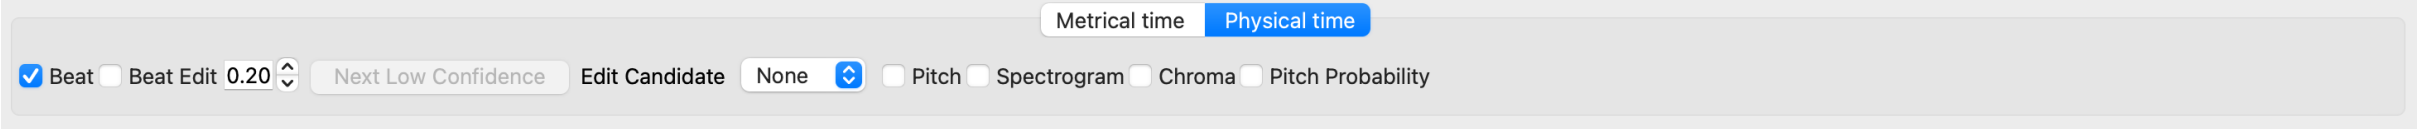

Note durations in metrical time

- Each beat corresponds to a quarter note. By default, the grid divides each quarter note into 12 equal subdivisions
- Six grid units represent an eighth note, and three grid units represent a sixteenth note
- To represent shorter notes, increase the number of subdivisions

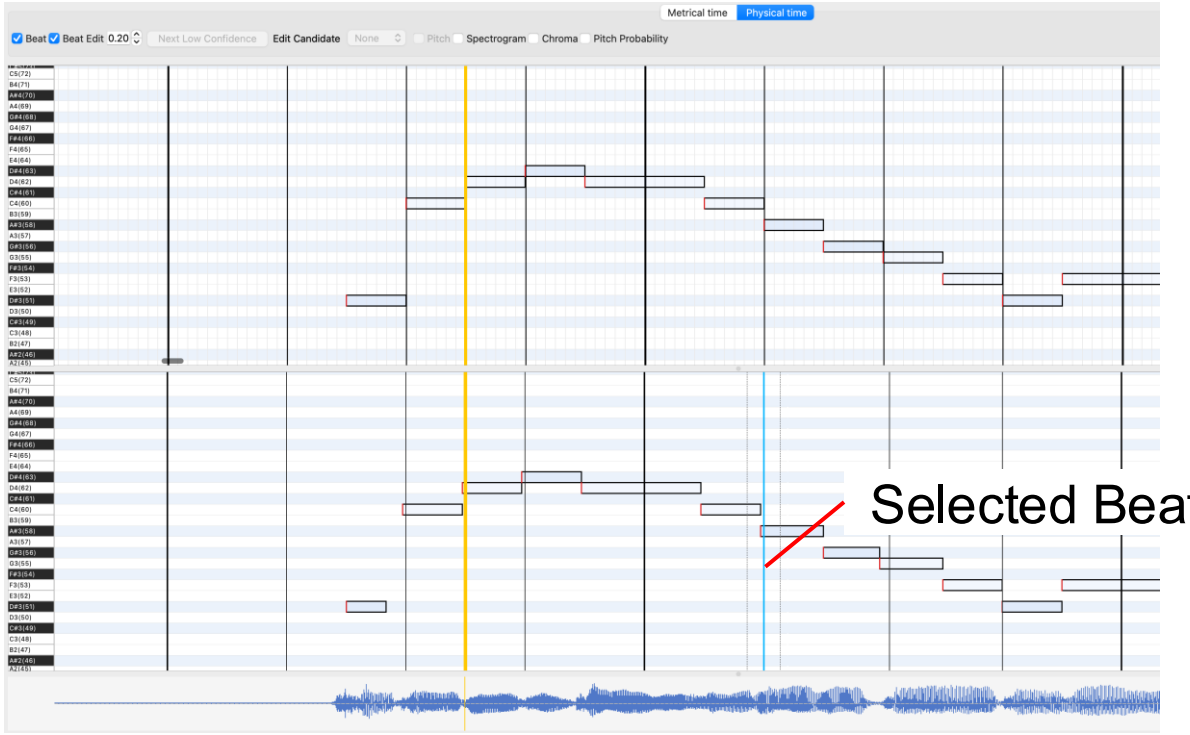

Physical-time controls

- Beats: Toggle beat visibility
- Beat Edit: Switch to Beat Editing Mode
- Correction Candidates: Select which correction candidates to display.
  (This feature is experimental, and its accuracy is limited.)
- Spectrogram: Display the spectrogram.
- Chroma: Display chroma features
- Pitch Probabilities: Display the pitch probabilities predicted by the transcription model

Beat editing

- Switch to Beat Editing Mode using the "Beat Editing" option in the Physical-Time controls to edit beats in Physical Time
- Note editing in Physical Time is disabled while Beat Editing Mode is active
- Editing beats also updates the beat positions in Metrical Time, which changes the note timings

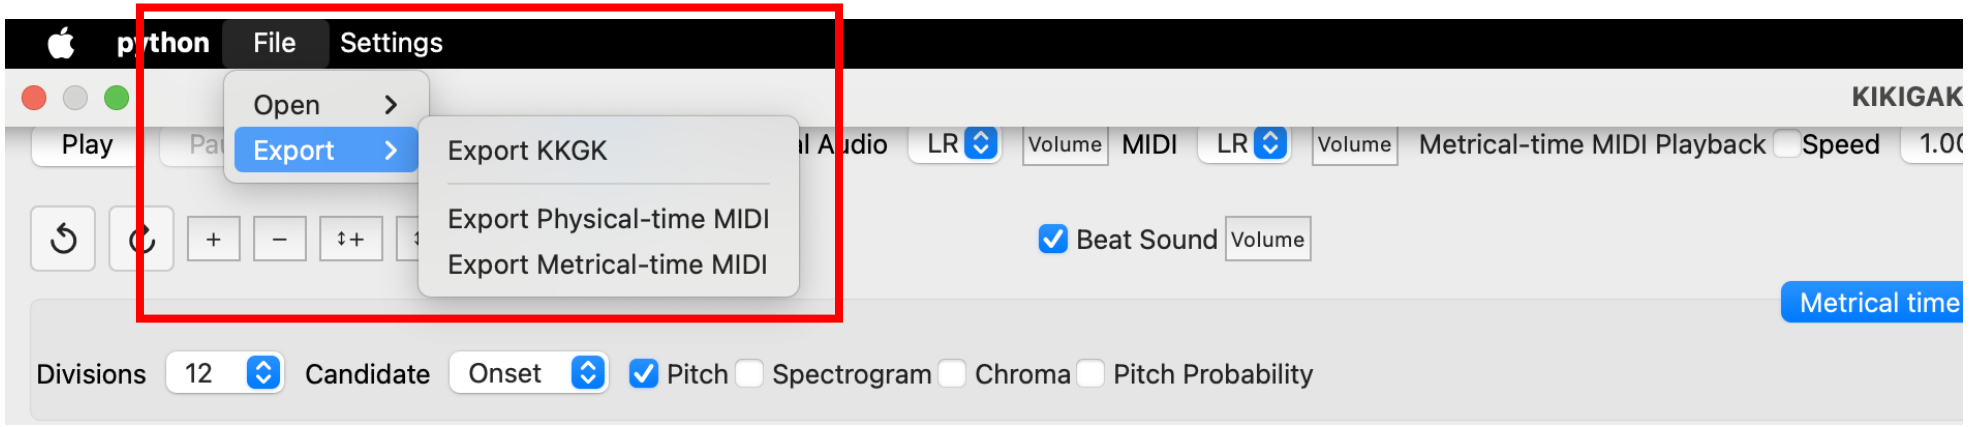

Beat editing operations

- Select: Left-click a beat, or drag to select multiple beats within an area
- Move: Drag and drop a beat. Hold Shift to lock the time axis
- Delete: Press Backspace while a beat is selected
- Insert: Double-click to insert a beat
- Toggle Downbeat: Press B while a beat is selected to toggle its downbeat status
- Undo: Click the "↺" button in the upper-left corner or press Ctrl (Command) + Z
- Redo: Click the "↻" button in the upper-left corner

Exporting files

- Export KKGK: Save the project as a .kkgk file
- Export Physical-time MIDI: Export the MIDI in Physical Time
- Export Metrical-time MIDI: Export the MIDI in Metrical Time
- If you stop working before completing the correction, be sure to save the .kkgk file
- Edit logs are automatically saved in the same directory as the .kkgk file

Additional notes and precautions

- You can change the MIDI instrument in Settings
- If notes overlap, their timings are automatically adjusted to prioritize note onsets
- You can adjust the heights of the Metrical-Time, Physical-Time, and audio waveform panels
- Volume adjustments made during playback do not take effect until playback is restarted
- After changing the playback speed, the first playback may take some time to start
- The number of subdivisions cannot be decreased
